Quality Assurance & Testing Report

Final QA Sprint Documentation

Field	Value
Project	YallaMarket - Digital Marketplace
Course	Software Engineering
Document Type	QA Documentation / Test Plan / Test Cases / Bug Summary
Version	1.0 - Final Submission Draft
Prepared For	Final Course Project Submission
Prepared By	Baraa Masri and YallaMarket Project Team
Date	May 2026
Methodology	Agile / Scrum
Related Sprint	Sprint 5 - Final QA & Delivery

This document summarizes the final manual quality assurance process for YallaMarket. It is aligned with the SRS scope and the implemented full-stack system.

Contents

1. Document Purpose.....	3
2. Testing Scope	3
3. Test Environment	3
4. Testing Strategy	3
5. Entry and Exit Criteria.....	3
6. Manual Test Cases.....	5
6. Manual Test Cases (continued)	6
7. Test Execution Summary.....	7
8. Bug Summary and Jira Evidence.....	7
9. Requirements Traceability Matrix.....	8
10. QA Notes and Known Limitations.....	9
11. Final QA Sign-Off	9

1. Document Purpose

The purpose of this document is to provide structured quality assurance evidence for the YallaMarket final submission. It documents the testing scope, manual test plan, executed test cases, results, bug tracking evidence, and final QA conclusion.

The QA process focuses on validating the implemented system against the project SRS, current full-stack implementation, and final course submission requirements.

2. Testing Scope

The testing scope covers the main implemented customer, authentication, cart, checkout, localization, and admin workflows.

Area	Included in QA	Notes
Storefront	Yes	Homepage, categories, product listing, search, product details.
Shopping Cart	Yes	Add, update, remove, totals, localStorage persistence.
Checkout and Orders	Yes	Form validation, order summary, order submission.
Authentication	Yes	Register, login, logout, JWT-based session handling.
Admin Dashboard	Yes	Dashboard stats, product/category/order management.
Localization	Yes	Arabic/English switch with RTL/LTR behavior.
External Payment Gateway	No	Real external gateway integration is outside the final implemented scope.
Automated Testing	No	Manual QA was used for the final course project validation.

3. Test Environment

Field	Value
Frontend	React + Vite + Tailwind CSS
Backend	Express.js REST API
Database	SQLite
Authentication	JWT with password hashing
Browser	Chrome / Edge latest versions
Execution Type	Manual functional testing
Data State	Seeded database / final demo data
Version Control	GitHub repository and final ZIP archive
Agile Tool	Jira board with Sprint 5 QA bugs and delivery tasks

4. Testing Strategy

- Validate each core user workflow from the frontend user interface.
- Check backend-connected flows such as authentication, product retrieval, and order submission.
- Verify important state behavior such as cart persistence through localStorage.
- Test admin workflows only using admin credentials and protected pages.
- Record actual results and compare them with expected results.
- Create Jira bugs for issues discovered during final QA and verify them after fixes.

5. Entry and Exit Criteria

Type	Criteria	Status
------	----------	--------

Type	Criteria	Status
Entry	Frontend runs successfully in the development environment.	Met
Entry	Backend server starts and exposes required API endpoints.	Met
Entry	SQLite database contains valid seed/demo data.	Met
Entry	Core pages are reachable through application routing.	Met
Exit	Major customer workflows pass manual testing.	Met
Exit	Authentication and checkout workflows are verified.	Met
Exit	Resolved Jira bugs are marked and verified after QA.	Met
Exit	Known limitations are documented honestly in the final report.	Met

6. Manual Test Cases

The following manual test cases cover the highest-value workflows required for the final submission. All test cases were designed from the SRS scope and current implementation.

ID	Feature	Scenario	Preconditions	Steps	Expected Result	Actual Result	Status
TC-01	Home / Categories	Open the homepage and view category entry points.	Application running with seeded categories.	Open / and inspect homepage categories.	Categories are displayed correctly.	Categories loaded successfully from API.	Pass
TC-02	Category Page	Open a category page from the homepage.	Categories and products exist.	Click a category card/link.	Related products are displayed correctly.	Products displayed successfully for the selected category.	Pass
TC-03	Search / Filter	Search for a product inside a category.	User is on a category page.	Type Arabic or English product name in search field.	Matching products appear and non-matching products are filtered.	Search filtering works correctly.	Pass
TC-04	Product Details	Open a product details page.	Product exists in database.	Click a product card.	Product details, price, image, and stock status appear.	Product details loaded successfully.	Pass
TC-05	Related Products	Verify related products on product page.	Product page is open.	Scroll/view related product section.	Related products are displayed when available.	Related products section displayed correctly.	Pass
TC-06	Cart	Add an available product to the cart.	Product is in stock.	Click add-to-cart button.	Product is added and cart count updates.	Cart updated successfully.	Pass
TC-07	Cart	Update item quantity in cart.	Cart contains at least one item.	Increase and decrease quantity.	Quantity, subtotal, and total update correctly.	Cart totals updated correctly after quantity changes.	Pass
TC-08	Cart	Remove an item from the cart.	Cart contains at least one item.	Click remove/delete action.	Item is removed and cart total is recalculated.	Item removed successfully.	Pass
TC-09	Cart Persistence	Refresh browser after adding products.	Cart contains products.	Refresh the page.	Cart remains saved after refresh.	Cart persisted successfully using localStorage.	Pass
TC-10	Checkout	Open checkout with empty cart.	Cart is empty.	Navigate to /checkout.	System prevents empty checkout or displays empty cart message.	Empty cart handling displayed correctly.	Pass
TC-11	Authentication	Register a new user account.	User email is not already registered.	Fill registration form and submit.	Account is created successfully.	Registration completed successfully.	Pass
TC-12	Authentication	Login with valid credentials.	Registered user exists.	Submit valid email and password.	User is authenticated and token/session is stored.	JWT authentication works correctly.	Pass

6. Manual Test Cases (continued)

ID	Feature	Scenario	Preconditions	Steps	Expected Result	Actual Result	Status
TC-13	Authentication	Login with invalid credentials.	Login page is open.	Submit invalid email/password.	System rejects login and shows feedback.	Invalid login handled correctly.	Pass
TC-14	Authentication	Logout from active session.	User is logged in.	Click logout.	User session is cleared from client state.	Logout completed and user returned to guest state.	Pass
TC-15	Checkout / Orders	Submit a valid checkout order.	User is logged in and cart contains item(s).	Fill customer/delivery/payment fields and submit.	Order is submitted and confirmation/feedback appears.	Checkout process completed successfully.	Pass
TC-16	Admin Access	Access admin routes as non-admin user.	Non-admin user is logged in or user is logged out.	Navigate to /admin.	Access is blocked or redirected.	Admin route protection works correctly.	Pass
TC-17	Admin Dashboard	View admin dashboard statistics.	Admin user is logged in.	Open /admin.	Dashboard statistics are visible.	Admin dashboard displayed successfully.	Pass
TC-18	Admin Management	Verify product/category management screens.	Admin user is logged in.	Open admin products/categories pages and review forms/tables.	Admin management UI loads and data is visible.	Admin management screens work correctly.	Pass
TC-19	Admin Orders	Update order status from admin orders page.	Admin user is logged in and order exists.	Open admin orders and update status.	Order status updates and persists.	Order status updated successfully.	Pass
TC-20	Localization / Routing	Verify language direction and invalid route handling.	Application is running.	Switch Arabic/English, then open invalid product/category route.	RTL/LTR updates correctly and invalid route shows fallback.	Language direction and fallback behavior verified.	Pass

7. Test Execution Summary

Metric	Result
Total test cases prepared	20
Total test cases executed	20
Passed	20
Failed	0
Blocked	0
Pass rate	100%
Bugs documented in Jira	4
Bugs resolved / verified	4

The final manual QA execution result indicates that the tested core workflows are ready for final demonstration and submission.

8. Bug Summary and Jira Evidence

The following bugs were documented during the final QA sprint. Each issue was resolved or verified before final delivery.

Jira Key	Bug Title	Severity	Related Area	Resolution / Verification	Final Status
SCRUM-127	Cart total did not update immediately after quantity changes	Medium	Cart	Cart recalculation verified after quantity changes.	Done / Verified
SCRUM-128	Checkout validation messages were unclear for incomplete forms	Medium	Checkout	Validation feedback improved and verified.	Done / Verified
SCRUM-129	Language direction was inconsistent after switching between Arabic and English	Medium	Localization	RTL/LTR switching verified across pages.	Done / Verified
SCRUM-130	Invalid product routes needed improved fallback handling	Low	Routing / Error Handling	Fallback behavior verified for invalid routes.	Done / Verified

Sprint 5 also included delivery-focused tasks such as final QA documentation, final presentation/demo preparation, and Jira/GitHub evidence collection.

Work	Assignee	Reporter	Priority	Status	Resolution	Created
SCRUM-130 Invalid product routes needed improved fallb...	Yahya Zyoud	BaraaMasri99	Medium	DONE	Done	May 10, 2026, 10:25 I

9. Requirements Traceability Matrix

Requirement / Area	Implementation Area	Related Test Cases	Verification Result
Browse categories	Homepage, category API/service	TC-01	Pass
View category products	Category page, product API/service	TC-02	Pass
Search/filter products	Category page search UI/API filtering	TC-03	Pass
View product details	Product page, product details API	TC-04, TC-05	Pass
Add/update/remove cart items	Cart context, cart page, product actions	TC-06, TC-07, TC-08	Pass
Persist cart	localStorage cart persistence	TC-09	Pass
Checkout workflow	Checkout page, order service/API	TC-10, TC-15	Pass
Register/login/logout	Auth UI, auth API, JWT session	TC-11, TC-12, TC-13, TC-14	Pass
Admin dashboard and management	Admin dashboard, products/categories/orders pages	TC-16, TC-17, TC-18, TC-19	Pass
Arabic/English localization	Language context, dir/lang update	TC-20	Pass
Error handling / invalid routes	NotFound/fallback UI	TC-20	Pass

10. QA Notes and Known Limitations

- The QA process was performed manually because the course project scope emphasizes documentation, implementation, and final demonstration rather than automated test infrastructure.
- Real external payment gateway integration is considered a future enhancement. The current system supports payment method selection within checkout.
- The logout workflow clears the client-side session/token; advanced server-side token invalidation can be added in a future security improvement.
- The admin dashboard and management screens were verified for final demo usage using prepared demo data.
- Final screenshots from Jira, GitHub, and the running system should be included in the comprehensive final report PDF.

11. Final QA Sign-Off

Sign-Off Item	Status
Core user workflows tested	Approved
Admin workflows tested	Approved
Localization behavior tested	Approved
Jira bugs documented and verified	Approved
Ready for final report and demo	Approved

Final QA conclusion: Based on the executed manual test cases and resolved QA bugs, YallaMarket is considered ready for final course submission and recorded system demonstration.
